Recall #: N900043 | SEAT BELT BUCKLES Recall Date: 1990 Jun 01

Recall Description

General Motors of Canada has determined that a defect which relates to motor vehicle safety exists in some 1984-90 Chevrolet Camaro and Pontiac Firebird model vehicles. Some seat belt buckle assemblies in affected vehicles may not latch, or may not release, due to fracture of the red push button which can occur during seat belt connection or disconnection.

Remedy

To correct this condition, all involved vehicles will have the pushbutton assemblies replaced and have a protector shield added (except for certain 1989 and all 1990 vehicles which have revised lower cover ramps and as a result do not need protectors). Also, any buckle assemblies which are found not to function correctly, or which have fractured pushbuttons, will be replaced.

This recall was open as of the date/time that this report was generated. For more information, or to find out if the recall has been closed, please contact PONTIAC or visit [GM's website](#).
